Education

Nanyang Technological University Singapore **Aug 2024 – Dec 2027**

Bachelor of Engineering (Hons) in **Computer Engineering**

Skills

- **Programming**: Python, Java, C, C++, JavaScript, SQL, React, Node js, typescript, Embedded C
- **AI & Machine Learning:** Scikit-learn, Pandas, NumPy, PyTorch, TensorFlow , M, LLM application, AI- wrappers, Computer Vision, LLM's.
- **Web & APIs:** RESTful APIs, HTTP Requests, JSON
- **Databases:** SQL, Database Design, Data Retrieval, MongoDB
- **Tools & Platforms**: Git, VS Code, Jupyter Notebook, MATLAB, n8n, Code Composer Studio (CCS), STM32CubeIDE, Qoder, Claude Code, Lovable, Docker
- **Embedded Systems:** MSP432, STM32F407VET6, Raspberry Pi 4, Arduino, Basys3 (FPGA).
- **SWE Practices:** Agile Development, System Design, Requirement Analysis, Version Control (Git)

Work Experience

AI Consultant, Skyview Capital **Jun 2025 – Nov 2025**

- Evaluated 10+ early-stage AI startups by analysing product demos, business models, and technical approach; discussed directly with founders to assess viability and growth potential.
- Wrote investment briefs summarizing key risks, strengths, and market opportunities to support the VC team's decision-making.

AI developer/Co-Founder, Game Plus **Oct 2024 – Feb 2025**

- Developed AI agents using N8N to generate dynamic NPC behaviours and scene packs (running, jumping, idle animations). Enabling context-aware in-game interactions without manual scripting.
- Automated NPC content creation, reducing manual animation workload by 50% and accelerating game development timelines

Projects

Gamified JC School Orientation System **Jan 2025 – Apr 2025**

- Built a web prototype in a 5-member team to help students explore junior colleges through interactive maps.
- Integrated Google Maps API and MOE JSON data for real-time, location-based school information.
- Implemented dynamic content loading using JavaScript and SQL, delivered a working end-to-end system.

RSLK MAX Autonomous Robot – Embedded Systems Project **Sep 2025 – Nov 2025**

- Developed embedded C firmware on TI MSP432 (ARM Cortex-M4F) to control motors and process sensor feedback.
- Implemented PID-based line following, tachometer speed tracking, IR sensing, and collision detection.
- Built modular test routines and debugged via UART in Code Composer Studio to ensure autonomous navigation

Autonomous Navigation Robot – Multidisciplinary Design Project **Jan 2026 – Mar 2026**

- Programmed STM32F407 (Embedded C) to execute motion commands from Raspberry Pi via serial communication.
- Designed encoder-based motor control achieving distance accuracy and precise turns.
- Integrated with Pi-based image detection and path planning to deliver a competition-ready autonomous robot.

Hackathon

SimplifyNext Agentic AI Hackathon 2025

- Developed an AI-powered plant care assistant that identifies plant species from images, tracks growth via photo logs, and delivers personalized watering reminders using agentic AI workflows.
- Integrated computer vision and LLM-based guidance to create a user-friendly system for maintaining plant lifespan.

NUS NCS Hackathon 2024

- Designed a crowd management prototype leveraging Large Language Models (LLMs) to interpret real-time crowd data, predict congestion hotspots, and recommend mitigation strategies for public safety.
- Collaborated in a time-constrained setting to build a functional concept addressing urban operational challenges.
